 **AQUATABS®**  
WATER PURIFICATION TABLETS

## » Features:

- Aquatabs: effervescent tablets that dissolve rapidly in water in order to destroy the microorganisms which are the cause of diarrhea, typhoid fever, cholera, trachoma, didatitose, etc.
- Aquatabs are produced according to the International Public Health specifications.

## » Properties:

- The active component of Aquatabs is the "Sodium Dichloroisocyanurate" (NaDCC)

## » Utilization:

- Aquatabs are indicated to treat 1 liter of water.
- Put one tablet of Aquatabs in 1 liter of water, and wait about 30 minutes before drink it.
- Aquatabs must be used to disinfect clear water in the case of heavily soiled water, filter or decant the water before you use Aquatabs.
- Aquatabs are used by major humanitarian organizations of the World: United Nations, UNICEF, International Red Cross, etc..
